Other Research Projects

Explaining Attention-Based Graph Neural Networks Post-Hoc With Attention Flows (2022)
Collaborators: Paymon Haddad, Brian Tagle, Yizhou Sun
Location: UCLA Scalable Analytics Institute
Description: We propose a simple mechanism based on attention flows, which are Shapley value explanations, to augment the post-hoc interpretability of attention-based graph representation learning models by identifying nodes in the input graph that contribute most to predictions.
Notes: **Report**

Selecting Core Subgraphs for Efficient Graph Neural Network Training (2021-2022)
Collaborators: Harsh Chobisa, Yizhou Sun, Baharan Mirzasoleiman
Location: UCLA Scalable Analytics Institute
Description: We developed algorithms to condense large networks into small, (possibly synthetic) graphs that, when used to train a graph neural network, can yield comparable test performance with more efficient training.
Notes: **Report**, **Theoretical Analysis**

Expressive Graph Transformers (2020-2021)

Collaborators: Ziniu Hu, Yizhou Sun
Location: UCLA Scalable Analytics Institute
Description: I empirically and theoretically studied the effect of different types of handcrafted and adaptive relational information for relation-aware self-attention on improving the expressiveness and performance of graph Transformers, particularly on NP-hard graph problems. As part of this project, I implemented and trained a multi-GPU graph Transformer model using PyTorch.

Twitter Saliency Algorithm: Identifying Unintentional Harms to Gender Non-Conforming Individuals (2021)
Collaborators: Michael McKenna
Description: We attempted to uncover unintentional harms of the Twitter saliency algorithm, e.g. 1) identifies images of potentially-cis or binary-presenting individuals as more salient than those of gender non-conforming folks, 2) identifies undesirable secondary sex characteristics of gender non-conforming individuals that may trigger body dysphoria.
Notes: **Report**

Heterogeneous Graph Transformer (2020)
Collaborators: Ziniu Hu, Yizhou Sun
Location: UCLA Scalable Analytics Institute
Description: I adapted the implementation of the Heterogeneous Graph Transformer (HGT) to efficiently embed web-scale knowledge graphs (e.g. YAGO, DBpedia) for link prediction and ran R-GCN baselines. Additionally, I prepared an OGB leaderboard submission in which I applied HGT to the ogbl-ppa dataset.

Robust Model-Agnostic Meta-Learning for Binary Content Moderation Tasks in Natural Language Processing (2020)
Collaborators: John Dang, Kai-Wei Chang
Location: University of California, Los Angeles
Description: We investigated applying Model-Agnostic Meta-Learning (MAML) to boost performance on binary content moderation tasks in low-resource contexts. Using PyTorch, we compared the ability of a model pre-trained with MAML to adapt to unseen binary content moderation tasks to those of a model pre-trained using traditional transfer learning approaches and a model trained from scratch.
Notes: **Report**

MovieLens Recommender System (2019)
Collaborators: Amit Mondal, Bryan Chiang, John Dang, Jyun-Yu Jiang, Wei Wang
Location: University of California, Los Angeles
Description: We created a recommender system to predict the binary rating for 4M unseen UserID-MovieID pairs in the MovieLens dataset. We surveyed the performance of content-based (e.g. TF-IDF, genre-based decision tree, etc.) and collaborative filtering (e.g. SVM, SVD, element-wise matrix factorization, tabular matrix factorization, hybrid matrix factorization, etc.) methods. **We achieved the third highest ROC-AUC on the test set in our data mining class.**
